**DETAILED ACTION**

***Election/Restrictions***

1. This application contains claims directed to the following patentably distinct species:
  - i. Species I: Generating digital signatures based on selecting at least one Gap Diffie-Hellman (GDH) group of elements relating to a curve. See specification, p. 3, line 22 – p. 4, line 16. Claims 1-47 are believed to belong to this group.
  - ii. Species II: Generating digital signatures based on encrypting using a Weil pairing on a Jacobian of at least one super-singular curve. See specification, p. 4, line 17 – p. 5, line 7. Claims 48-73 are believed to belong to this group.

2. The species are independent or distinct because GDH may be used with curves of genus greater than 1 (Species I), not requiring Weil pairing, whereas Weil pairing (Species II) is used for super-singular curves of genus 2 or 3, which do not give a GDH group; therefore, the species are distinct as being mutually exclusive.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable

thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
